

Brainwave Adaptive Learning is the effective and affordable way for you to increase the learning outcome of your class !

- Brainwave Adaptive Learning is designed to **help your students improve their performance and gain mastery of your course!**
- In less than an hour, our *true* adaptive online learning system provides you and your student with real-time analytics necessary to determine their best learning strategy
- You have vital information about students learning preferences which will help you provide tailored instructions
- Want to use your own content? No problem! You can add your content easily to our AI based system. We also have the ability to customize any course for you in no time at all!
- Brainwave Adaptive Learning solution provides:
 - Five ways of learning
 - Intelligent feedback and remediation
 - Competency building by repeated learning cycles
 - Assessment platform for students to prepare for high stakes exams

Key Benefits:

- Saves you time and makes you more efficient
- Five proven learning styles deliver your course content to help your students better understand your course
- Much more cost effective for your class
- Full professional development and adaptive teaching certificate available
- Automated grading for all courses included as homework assignments for the course
- Custom solution is available to map your course curriculum to the adaptive content
- Changes and additional content are easily uploaded
- Tech Support Available
- The education technology developed by the leading MIT educator

Key Features:

- Patented Technology – First and only Brain-Computer-Interface Adaptive Learning system on the market from a MIT spin-off company
- Available for multiple platforms – android, windows and iOS systems are fully supported
- SaaS delivery – no requirements beyond an internet connection and internet-enabled device
- Available in 30+ different languages
- Custom Solutions available
- Real-time Analytics for each student
- A true turnkey solution! No need to work with your institution's IT department or worry about challenging implementations

HOW IT WORKS?

- The learner puts on the EEG headband
- The alpha, beta and gamma waves are observed and analyzed while the student is rotated through the content in five different learning strategies
- The Brainiak™ App records the brainwave data in real time
- The Big Data AI software finds the learner's best learning strategy
- The brainwave report is generated and the content is presented in the best learning strategy
